croslite<sup>ag+</sup>  
anti-microbial shoe

superior grip  
soles

front and back  
adjustable straps

protective  
toe cap

protective heel rim

lightweight  
and durable

# care and maintenance

## clean

keep your crocs™ shoes clean by rinsing them with cold water and soap, or to bring them back to their original luster, try crocsbutter™.

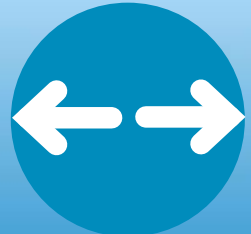

## heat

do not expose your crocs™ shoes to extreme heat or intense sunlight for an extended period of time. due to the unique nature of the croslite™ material, high-temperatures can cause them to warp.

## grip

crocs™ shoes are known for their great grip but like any performance tire, when the tread becomes worn, their grip becomes compromised. that's when you know it's time to treat yourself to a new pair.

## fit

to adjust the fit of your crocs™ shoes, grasp the heel strap with both hands on either side of the "crocs"™ wording and gently stretch outwards from the middle until it retains the desired fit. for a customized fit that can be adjusted for any activity, use the crocs™ turbo strap™.
